Subject: Take Microsoft Down!

I am adamantly against allowing Microsoft to get off "Scott Free"! They have tried to take or "steal" ever technology from Java to now?? VBox? When is their sweeping invasion of every major industry using computers going to end? If they can not buy what they want, they STEAL IT and change it so that it ONLY works on Windows producrts. Check out the numbr of web sites that can ONLY be browsed with Internet Explorer!!

Microsoft has invented little, but more like the Janapese who take a product and change it for their own resales. so goes Microsoft. No innovation, just outright high-jacking of any company who might have a technology that Microsoft might want to call their own.

We consumers have some intelligence and are thankful that this email site has been set up to allow our opinions about Microsoft.
